Destructor

Destructor is used when we want to destroy the objects
Constructors are used to initialize an object of a class

```python
# constructor and destructor
class Customer:

    def __init__(self):
        print("Default Constructor")

    def __del__(self):
        print("Delete the Object")

Customer()
```

Default Constructor
Delete the Object

```python
# constructor and destructor
class Customer:

    def __init__(self):
        print("Default Constructor")

    def getDetails(self, id, username):
        self.id = id
        self.username = username

    def display(self):
        print(self.id)
        print(self.username)

    def __del__(self):
        print("Delete the Object")

c = Customer()
c.getDetails(101, "Admin")
c.display()

Default Constructor
101
Admin
Delete the Object
```
